ROTRONIC LOW DEW POINT PROBE

TECHNICAL INFORMATION.

AirChip4000 / HYGROMER® LDP-1

The low dew point probe comes with the latest AirChip4000 technology. Calculates a measurement from the average of 8,000 single points within a 2 second interval and, together with the HYGROMER® LDP-1 dew point sensor, delivers measurements of the highest quality.

Field of Application

The low dew point probe can be used in compressed air systems, refrigeration dryers and adsorption dryers. ROTRONIC offers the probe with EX certificate for environments with ATEX requirements. Please refer to the ATEX data sheet for more detailed information.

Accessories

Suitable measurement chambers with a defined air flow rate and a quick connector for optimum dew point measurement are available in POM and stainless steel. The base unit can be used for customization.
